THE CUSTOMER

Established in 2003, Casual Living Products Unlimited, partnering with its sister facility that recycles post-consumer plastics, manufactures residential furniture and commercial site furnishings that are durable, colorful and low maintenance. These products have exclusive product designs and quality features.

THE CHALLENGE

Casual Living Products Unlimited was in a state of rampant growth. The oversight of technology and management was left to the CFO. Not only was the management of technology not the best use of the CFO's time and skills, there were also dramatic losses of efficiency and a daunting new ERP system looming over his head. The CFO needed to find a reliable, trusted I.T. partner with a growth minded mentality and consultative services.

"Great work, great response time. Very Helpful!"

*- Geoff Warrell
CFO*

THE SOLUTION

Casual Living Products Unlimited sought a phased approach to managing their technology. ONE 2 ONE offered just this. Beginning with managed services for daily support, monitoring and protection on the existing infrastructure, ONE 2 ONE provided a view into the system. This increased their ability to bring tech up to industry-standards through basic project implementation and evaluate the infrastructure and operations with the executive team to the next stage.

THE PLAN

While Casual Living Products Unlimited was excited by the possibilities of their chosen solution, there were going to be a lot of changes and moving parts till the project was done. Through consultative process, ONE 2 ONE examined existing technology, business process, growth targets and production needs. The outcome was selection and roadmap of a new ERP system, built to support rapid growth in production.

THE RESULTS

Integrated
ERP System

Increase in Efficiency
