THE CUSTOMER

Founded in 1999, Richard F. Mula Architects is a client-focused, design-driven, full-service architecture, planning and design firm with a vast and diverse portfolio of project experience and expertise. Their approach and efforts reflect an enduring commitment and belief that design is one of our strongest resources. As architects, planners, and designers, they excel through their expertise and strategic thinking; empowering their clients to solve the multitude of challenges with optimal results.

THE CHALLENGE

The firm had outgrown their offices and needed to relocate. Their requirements included a security system, and a resilient Information Technology with a seamless user experience, whether accessing it from within the office, or remotely while traveling. They also wanted to consolidate the management of all I.T. vendors to a single partner.

THE SOLUTION

Partner with a Managed Services Provider to administer a comprehensive hardware and software life cycle management program. Deploy a secure and robust remote access solution. Install an IP Camera based managed security system. Develop, implement and test a Disaster Recovery and Business Continuity solution.

THE PLAN

Install software agents on all Information Technology assets to monitor performance and proactively resolve any issue before they impact the business. Develop a complete inventory and identify any areas requiring immediate attention, then with the client's input, develop plans and budgets to resolve. Implement a hardware and software life cycle program to maximize the investment and assist in budget forecasting. Evaluate, develop and test a Disaster Recovery Program to safeguard the company. Deploy a Virtual Private Network (VPN) solution for secure and easy access to large data files from 'anywhere'. A fully managed security system comprised of advanced IP cameras provides security for the office, the employees, and Mula' Architects' clients.

THE RESULTS

Secure Facility

High Performance
Infrastructure

Able to Support
Growth
